## Test 9 Innovator

### Reading and Writing Module 1

Many feline experts suggest that due to their relatively recent domestication, cats lack the same dependence on humans for food as dogs. This has led to the common belief that cats are inherently antisocial and aloof. However, contrary to this _____ notion, Kristyn Vitale Shreve and her colleagues concluded in a 2017 study that the majority of domestic cats would choose human companionship over any other stimuli, including toys and food.

Scientists closely monitor global sea levels due to their impact on coastal regions. Paleoclimatologist Anders Carlson compares sea levels to water in a bathtub with multiple running faucets and drains. However, where water rises and falls depends on a number of factors. For example, as long as ice sheets near Greenland and Antarctica continue to melt into the ocean, Carlson predicts _____ rise in sea levels around those regions.

Despite its freezing temperatures, Lake Baikal, located in Siberia, Russia, _____ a remarkably rich ecosystem that boasts over 1,000 plant and 2,500 animal species, with 80% of them unique to the lake. The lake's depth, over 5,000 feet, fosters the growth of unusually large organisms, and the lake's isolated location has allowed for the evolution of diverse species adapted to the lake's specific conditions.

PREV. QUESTION NEXT QUESTION

3. Which choice completes the text with the most logical and precise word or phrase?

× A moderates

× B prevails

× C harbors

× D diverges

Eager to possess an artifact once donned by a third-century BCE Scythian king, the Louvre Museum purchased what was known as the Tiara of Saitapherne from a Russian art dealer in 1896. German archaeologist Adolf Furtwängler was one of many experts to declare the museum had been duped, citing design inconsistencies as proof. However, it wasn't until goldsmith Israel Rouchomovsky came forward to reveal that he had created the artifact that the Louvre _____ its stance that the artifact was genuine.

PREV. QUESTION NEXT QUESTION

4. Which choice completes the text with the most logical and precise word or phrase?

× A corroborated

× B rescinded

× C constrained

× D renewed

The *Kojiki* is an ancient Japanese text that dates back to the eighth century. Literary expert Paul Brians has observed that the creation myth in the *Kojiki* and the story of Orpheus and Eurydice in Greek mythology are _____. In both tales, the husband travels to the underworld to save his wife who has passed away. However, neither husband is successful in his mission.

PREV. QUESTION NEXT QUESTION

5. Which choice completes the text with the most logical and precise word or phrase?

× A serendipitous

× B metaphorical

× C analogous

× D allegorical

The following text comes from William Jennings Bryan's 1896 speech "A Cross of Gold."

> If they say bimetallism is good, but that we cannot have it until other nations help us, we reply that, instead of having a gold standard because England has, we will restore bimetallism, and then let England have bimetallism because the United States has it. If they dare to come out in the open field and defend the gold standard as a good thing we will fight them to the uttermost. Having behind us the producing masses of this nation and the world, supported by the commercial interests, the laboring interests, and the toilers everywhere, we will answer their demand for a gold standard by saying to them: <u>You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold</u>.

PREV. QUESTION NEXT QUESTION

6. Which choice best describes the function of the underlined portion in the text as a whole?

× A It compares the gold standard to crucifixion.

× B It calls for the subjugation of supporters of the gold standard.

× C It explains why England rejected the gold standard.

× D It rejects the demands of commercial and labor interests.

**Text 1**

Conventional wisdom views wasps as harmful, aggressive pests. Participants in a 2018 study conducted by The University College in London reported twice as many negative feelings about wasps as they did about bees. Wasps, unlike bees, can sting multiple times, and they often build nests near garbage cans to forage for sugary foods, which can pose a hazard to people passing by. At the sight of a wasp, most people either recoil in disgust or swing at it to eliminate the insect.

**Text 2**

Biology professors Scarlett Howard and Adrian Dyer categorize wasps as exceptionally intelligent creatures. They found that wasps can recognize human faces and can be trained to differentiate between colors. Howard and Dyer also say that despite their painful stings, wasps are crucial pollinators and pest control agents. Numerous plants depend on them for pollination, and they eat potentially harmful insects like spiders, cockroaches, and flies; many organic farmers use wasps as a natural pest management tool.

PREV. QUESTION NEXT QUESTION

7. Based on the texts, how would Scarlett Howard and Adrian Dyer (Text 2) most likely respond to the "conventional wisdom" presented in Text 1?

× A By arguing that it is based on misconceptions about wasps, which are actually relatively harmless creatures

× B By asserting that it fails to recognize the important contributions that wasps make to the environment

× C By suggesting that their own findings help clarify why humans have an irrational fear of wasps

× D By recommending that more research be conducted on how to improve the public perception of wasps

In 2009, archeologists discovered a stone scarab, also known as a dung beetle, that bore the name of a lesser-known but impactful Egyptian pharaoh: Sheshonq I. The beetle's location in an ancient copper mine has helped scholars identify the route and the objectives of Sheshonq's military campaigns in Asia. The Egyptian army probably marched through the Negev desert toward the southern end of the Dead Sea, attacking mines in the area to disrupt local economies.

PREV. QUESTION NEXT QUESTION

8. Which choice best states the main idea of the text?

× A A scarab found in a copper mine has shed light on the military exploits of an Egyptian pharaoh.

× B Sheshonq I believed that ending his political rivals' copper production would weaken them.

× C The discovery of a scarab has proven beyond doubt that Sheshonq I successfully conquered the region.

× D Without the find of a stone scarab, the existence of Sheshonq I would have remained questionable.

The following text is from Emily Dickinson's 1890 poem "Tell all the truth but tell it slant."

Tell all the truth but tell it slant —
Success in Circuit lies
Too bright for our infirm Delight
The Truth's superb surprise
As Lightning to the Children eased
With explanation kind
The Truth must dazzle gradually
Or every man be blind —

PREV. QUESTION NEXT QUESTION

9. Based on the text, in what way is the truth like lightning?

× A Both truth and lightning are slanted.

× B Both truth and lightning must be avoided.

× C Both truth and lightning are easy to see.

× D Both truth and lightning can be overwhelming.

Scientists theorized that the introduction of the non-native insect species *Vespa mandarinia* (the Asian giant hornet) to the northwest region of the US has resulted in a concerning decline in the area's population of strawberry plants. However, Asian giant hornets do not feed on strawberry plants but instead prey on the plants' primary pollinator, the honey bee.

PREV. QUESTION | NEXT QUESTION

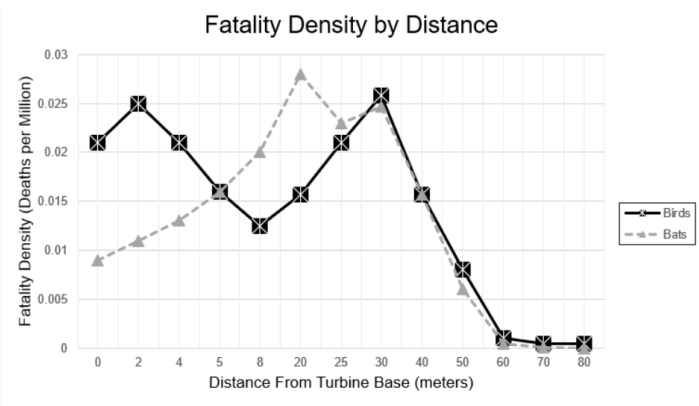

10. Which finding, if true, would most directly support the scientists' theory?

✖ A As the honey bee population decreases in the northwest region, the abundance of strawberry crops decreases as well.

✖ B As the Asian giant hornet population increases in the northwest region, the honey bee population also increases in the northwest region.

✖ C As the honey bee population increases in the northwest region, the abundance of strawberry crops decreases.

✖ D As the Asian giant hornet population decreases in the northwest region, the honey bee population also decreases.

Daniel Choi and his colleagues conducted a study on the effects of wind facilities on bat and bird populations in the Northeastern United States. Researchers examined data on bat and bird carcasses near wind turbines and analyzed the relationship between animal fatality rates and the distance from the turbine base. It was initially believed that turbine blades, which range from 2 to 80 meters in length, were the primary causes of mortality. However, researchers concluded that while both birds and bats did fatally collide with the blades, birds were more prone to lethal collisions with the pole situated on

PREV. QUESTION NEXT QUESTION

11. Which choice best describes data from the graph that support the researchers' conclusion?

✖ A The density of bird deaths was highest around 30 meters from the base.

✖ B The density of bird deaths was higher than that of bat deaths between 0 and 4 meters from the base.

✖ C The density of bat deaths was lowest at 8 meters from the base.

✖ D The density of bird deaths was equal to or higher than bat deaths between 30 and 60 meters from the base.

In the realm of research, anecdotal evidence is often dismissed, as most researchers argue qualitative research cannot replace statistically objective quantitative research. Researcher Christopher S. Penn concedes this point while also offering an alternative perspective: anecdotal evidence, or one's firsthand personal account, is still part of the research process. From focus groups to interviews, anecdotal evidence can be used as a starting point to investigate hypotheses, suggesting that _____

PREV. QUESTION NEXT QUESTION

12. Which choice most logically completes the text?

✖ A a study is not truly objective unless it also accounts for the subjects' personal experiences presented in these interviews as anecdotal evidence.

✖ B anecdotal evidence can be just as valid as quantitative research because focus groups and interviews are an integral part of the research process.

✖ C anecdotal evidence serves as a valuable tool in the early stages of research and can provide insights that inform the development of quantitative studies.

✖ D the majority of studies are actually biased because they unknowingly rely on qualitative research without accounting for anecdotal evidence.

The stone ruins of Hattusa, the one-time capital of the Hittite Empire, are located in north-central Turkey. The city was at its strongest in the 2nd millennium BCE, and its intact features are impressive. More than one hundred towers encased the upper city stronghold, which consisted of temples to deities of the Hittite and Hurrian pantheons. Among the Hattusa ruins, archeologists found an open-air rock sanctuary, the Yazilikaya, containing massive relief carvings of figures from Hittite mythology. Considering the Hattusa ruins as a whole, archaeologists have concluded

_____

PREV. QUESTION NEXT QUESTION

13. Which choice most logically completes the text?

× A Hattusa was ruled by an elite class of religious leaders.

× B Hattusa viewed religion as an integral component of its society.

× C the majority of citizens in Hattusa were skilled stone-workers.

× D the Yazilikaya was the most religiously significant site in the Hittite Empire.

Discovering a new animal is always a scientific achievement, but it is even more notable when that animal displays a distinct ability. The recently discovered snow fly, for instance, has a unique strategy for surviving at freezing temperatures: self-amputation. Whereas most animals living in extreme cold have protective adaptations such as thick coats or biological antifreeze in their blood, snow flies simply detach parts of their body as they begin to freeze. This process is controlled by specialized neurons in the insect's brain. In cold temperatures where the snow fly thrives, most animals' neuron channels typically slow down, indicating that

_____

PREV. QUESTION NEXT QUESTION

14. Which choice most logically completes the text?

× A the snow fly's brain has adapted differently to cold climates compared to most animals.

× B other insects have the potential to adapt to colder climates in the same way the snow fly has.

× C the snow fly's ability to detach its limbs could potentially work in a warmer climate as well.

× D neurons in the snow fly's brain must have some form of antifreeze, a typical defense against colder climates.

Quartz—the second most abundant mineral in the Earth's _____ of silicon and oxygen atoms arranged in a tetrahedral crystal lattice structure. Quartz can form through a variety of geological processes, but most of it is formed within igneous rock.

PREV. QUESTION NEXT QUESTION

15. Which choice completes the text so that it conforms to the conventions of Standard English?

A crust is composed

B crust, is composed

C crust: is composed

D crust—is composed

Neoplatonism is a philosophical movement that emerged in the 3rd century _____ heavily from the ideas of the ancient Greek philosopher Plato. Neoplatonists sought to decipher and develop Plato's teachings, focusing on metaphysics, cosmology, and the nature of reality.

PREV. QUESTION NEXT QUESTION

16. Which choice completes the text so that it conforms to the conventions of Standard English?

A CE drawing

B CE, drawing

C CE; drawing

D CE. Drawing

Unlike many astronomical theories proposed in the 1500s, _____. Brahe's dedication to recording the positions of celestial objects paved the way for a new era of empirical astronomy, which not only marked a pivotal shift in the way astronomical theories were constructed but also laid the groundwork for Johannes Kepler's subsequent laws of planetary motion.

PREV. QUESTION NEXT QUESTION

17. Which choice completes the text so that it conforms to the conventions of Standard English?

× A the scrupulous and comprehensive observations made by Tycho Brahe were the basis of his theory on their orbits.

× B Tycho Brahe focused on the scrupulous and comprehensive observations of celestial bodies to formulate his theory on their orbits.

× C Tycho Brahe's scrupulous and comprehensive observations of celestial bodies were the basis of his theory on their orbits.

× D Tycho Brahe's theory on the orbits of celestial bodies was rooted in scrupulous and comprehensive observations.

Wolfram von Eschenbach, a medieval German poet, is best known for his epic poem *Parzival*, which revolves around the quest for the Holy Grail, the cup of Jesus from the Last Supper. In his work, Wolfram deviates from the traditional Christian narrative and proposes a unique interpretation: the Holy Grail is a gemstone rather than a chalice. However, historian Stephen Pfann dismisses this _____ he suggests that the Holy Grail was, if anything, a cup made of clay.

PREV. QUESTION NEXT QUESTION

18. Which choice completes the text so that it conforms to the conventions of Standard English?

× A theory, and for

× B theory and for

× C theory, for

× D theory for

Different dictionaries apply varying criteria for when to declare words obsolete (no longer in use). For instance, *The American Heritage Dictionary of the English Language* considers a word obsolete if it has not appeared in print since 1755 while other dictionaries, such as the *Oxford English Dictionary*, _____ a more recent cutoff year.

PREV. QUESTION | NEXT QUESTION

19. Which choice completes the text so that it conforms to the conventions of Standard English?

× A use

× B uses

× C has used

× D is using

The ossicles are made up of three tiny bones in the middle ear and transmit sound to the inner ear. As sound waves hit the eardrum, _____ will vibrate, moving the ossicles. The third bone in the ossicles, the stapes, directs vibrations from the eardrum to the inner ear's oval window. This motion amplifies and transfers sound to the cochlea, where it's converted into electrical signals for the brain to perceive sound.

PREV. QUESTION | NEXT QUESTION

20. Which choice completes the text so that it conforms to the conventions of Standard English?

× A it

× B they

× C these

× D each

Although the term “Ponzi scheme” comes from the 1920s con artist Charles Ponzi, the first scam of this kind was conducted by Sarah Howe in 1879 when she opened the first-ever women’s-only bank, promising a high rate of return on savings _____ made possible through relying on the money of new depositors. Her fraudulent scheme sullied the idea of female financial services to such a degree that the next bank that catered exclusively to women did not open until forty years later.

PREV. QUESTION NEXT QUESTION

21. Which choice completes the text so that it conforms to the conventions of Standard English?

× A accounts—a feat

× B accounts; a feat

× C accounts. A feat

× D accounts a feat

Although there are no cures available for many genetic disorders, there are treatments that can help manage symptoms. One of the most common genetic disorders is cystic fibrosis, which affects various organs throughout the body. _____ some medications can reduce inflammation though researchers are looking into gene therapies as a more effective solution.

PREV. QUESTION NEXT QUESTION

22. Which choice completes the text with the most logical transition?

× A Currently,

× B In contrast,

× C Accordingly,

× D In other words,

Researchers at Stanford University and UC Berkeley compared the accuracy of Chat GPT's older 3.5 model to the newly released GPT 4.0. They found that GPT 4.0 produced less accurate answers to math equations than GPT 3.5. _____ OpenAI, the company behind Chat GPT, insisted the new model improves on the old one and attributes the alleged regression in quality to users getting more adept at noticing the program's flaws after extensive usage.

PREV. QUESTION | NEXT QUESTION

23. Which choice completes the text with the most logical transition?

- A Subsequently,
- B Consequently,
- C However,
- D Additionally,

A study led by Matthew Sachs has found that only 50 percent of people experience chills when listening to music. This phenomenon can be explained by the structural connections between specific areas of the brain: some individuals have more nerve fibers to support these connections, which in turn enhance communication between different brain regions. _____ the more fibers connecting the auditory cortex to brain regions that process emotion, the stronger the stimulation. This stimulation is what creates a sensation of chills.

PREV. QUESTION | NEXT QUESTION

24. Which choice completes the text with the most logical transition?

- A In other words,
- B Similarly,
- C Increasingly,
- D Subsequently,

While researching a topic, a student has taken the following notes:

- NASA scientists have used the James Webb Space Telescope to examine GJ 486-b.
- GJ 486-b orbits a red dwarf star while the Earth orbits the sun, which is a yellow dwarf star.
- Compared to yellow dwarf stars, red dwarf stars are smaller (up to 92%) and cooler (by thousands of degrees)
- GJ 486-b is larger than Earth by 30 percent and has much stronger gravity.
- The James Webb Space Telescope has revealed that there is water vapor in the vicinity of GJ 486-b.
- It is unclear whether the vapor is part of the planet's atmosphere or has simply been ejected from the red dwarf star.

PREV. QUESTION NEXT QUESTION

25. The student wants to describe how GJ 486-b and Earth differ to an audience already familiar with space terminology. Which choice most effectively uses relevant information from the notes to accomplish this goal?

× A GJ 486-b is 30 percent larger than Earth and orbits a red dwarf star instead of a yellow dwarf star.

× B NASA scientists have determined that GJ 486-b is a large, rocky planet, and unlike the Earth, it may contain water vapor in its atmosphere.

× C GJ 486-b orbits a red dwarf star, whereas Earth orbits a yellow dwarf star, which is significantly larger and hotter in comparison.

× D NASA has determined that GJ 486-b is a rocky planet with a gravitational force 30% stronger than the Earth's.

While researching a topic, a student has taken the following notes:

- Julien Pollack and Petr Matous of the University of Sydney have investigated work-based team building activities.
- They argue that adventure-based team events (like mountain biking trips) distract from goals relevant to the workplace.
- The most effective team-building activities, according to Pollack and Matous, emphasize developing existing relationships to maximize trust and efficiency.
- For one team event, Pollack and Matous ask employers to pair up employees to discuss a curated list of 36 questions to build familiarity.

PREV. QUESTION NEXT QUESTION

26. The student wants to give an example of an effective team-building activity. Which choice most effectively uses relevant information from the notes to accomplish this goal?

✖ A Team-building strategies exhibit varying levels of effectiveness, and adventure-based events are on the lower end of that scale.

✖ B A popular team-building strategy is taking employees out on experiences that maximize communication, such as mountain biking trips.

✖ C Grouping employees for question-based discussions can provide a valuable team-building experience, especially if participants have established relationships.

✖ D Adventure-based team-building activities may detract from meaningful employee objectives, which is why they should be avoided.

While researching a topic, a student has taken the following notes:

- Kagome is a traditional Japanese pattern that consists of interlocking triangles and hexagons.
- Basket weavers use this pattern when working with strips of wood or bamboo even though the hexagons create considerable open spaces in the basket.
- Inspired by kagome, researchers from the Massachusetts Institute of Technology have created a crystalline structure of iron and tin atoms.
- The kagome structure accounts for the anomalous behavior of the crystal, which deflects electric charges rather than acting as a typical metal conductor.
- Researcher Linda Ye notes that the empty spaces of the structure could be filled with another "type of atom" to change the structure's behavior.

PREV. QUESTION NEXT QUESTION

27. The student wants to explain how the structure of the kagome crystal affects the crystal's behavior. Which choice most effectively uses relevant information from the notes to accomplish this goal?

× A Researchers have created a new crystalline structure based on Japan's traditional kagome pattern of hexagons and triangles.

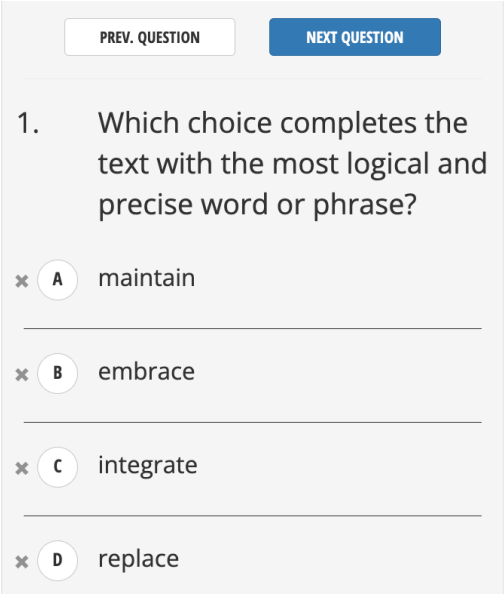

× B The kagome-like arrangement allows for open spaces between metal atoms, causing the crystal to redirect electricity instead of conducting it.

× C The tin and iron atoms in the "kagome" crystal structure are arranged with large open spaces, which could accommodate other types of atoms.

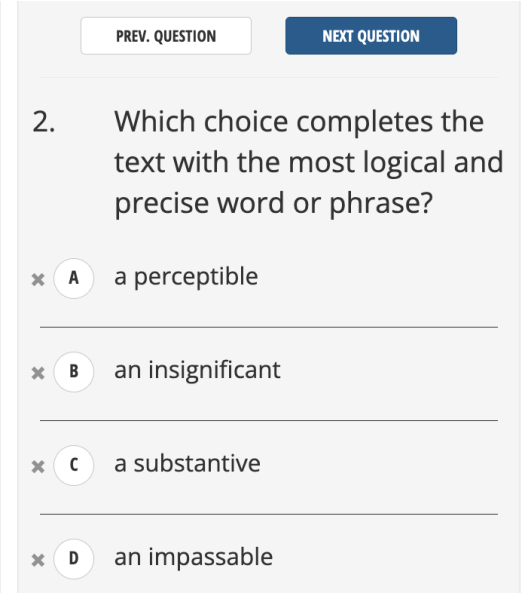

× D A substance composed of tin and iron atoms, which form the crystal, would be expected to behave like a typical conductor, but it does not.

## Reading and Writing Module 2

Vladimir Lenin, the leader of the Marxist revolutionaries who took control of Russia in the early 20th century, initially promised to allow the country's diverse ethnic groups to have a say in deciding their futures. Unfortunately, the Soviet government that arose after the rebellion mercilessly crushed independence movements, including those in Ukraine and Georgia, and mandated that Russian culture and language _____ local cultural traditions.

A team of researchers led by Belinda Alvarez conducted a study to investigate the potential correlation between the distribution of sponge species and the concentration levels of dissolved silica (dSi) in the ocean. By analyzing a global database and conducting their own research, the team concluded that there is _____ association between dSi levels and sponge distribution. Because there is no discernible difference, the team advises against using fossil sponges as a way to determine past dSi levels.

No one would suspect that Melita Norwood, _____ director's assistant, was actually a spy leaking information about atomic weapons to the Soviet Union. However, decades later, Norwood's true affiliation was finally discovered when a former Soviet officer released incriminating information about their contacts. Norwood likely would have been caught earlier in her career when a coworker reported her suspicious activity, but this charge was quickly dismissed due to the unbelievable nature of the accusation.

PREV. QUESTION NEXT QUESTION

3. Which choice completes the text with the most logical and precise word or phrase?

× A an amiable

× B an unassuming

× C a treacherous

× D a pragmatic

Fax machines were once _____ in offices around the world. While their popularity has significantly diminished with the advent of digital technologies, fax machines were, at one time, a business necessity. In 1966, it took six minutes to transmit a page by what was then called a "telecopier." However, by the mid-1980s, a page could be transmitted in about twenty seconds, and an office couldn't run without a fax machine.

PREV. QUESTION NEXT QUESTION

4. Which choice completes the text with the most logical and precise word or phrase?

× A expeditious

× B palpable

× C ubiquitous

× D irreproachable

The Battle of the Springs of Cresson was a turning point in the war between the Kingdom of Jerusalem and Sultan Salah al-Din. Salah al-Din dispatched an army to retaliate against the Crusaders who had raided his caravans; the king of Jerusalem deployed his troops to intercept. The Jerusalem knights encountered their opponents at Cresson and charged, but Salah al-Din's soldiers feigned a retreat and lured the Crusader force into an ambush where they vanquished the _____ army.

PREV. QUESTION NEXT QUESTION

5. Which choice completes the text with the most logical and precise word or phrase?

× A beleaguered

× B fickle

× C indomitable

× D venerated

The following text comes from the majority opinion in the 2023 Supreme Court case *Luna Perez v. Sturgis Public Schools*, authored by Justice Neal Gorsuch.

From ages 9 through 20, Miguel Luna Perez attended schools in Michigan's Sturgis Public School District (Sturgis). Because Mr. Perez is deaf, Sturgis provided him with aides to translate classroom instruction into sign language. For years, Mr. Perez and his parents allege, Sturgis assigned aides who were either unqualified (including one who attempted to teach herself sign language) or absent from the classroom for hours on end. Along the way, Sturgis allegedly misrepresented Mr. Perez's educational progress too, awarding him inflated grades and advancing him from grade to grade regardless of his progress. Based on Sturgis's misrepresentations, Mr. Perez and his parents say, they believed he was on track to graduate from high school with his class. But then, months before graduation, Sturgis revealed that it would not award him a diploma.

PREV. QUESTION NEXT QUESTION

6. Which choice best states the main purpose of the text?

× A To criticize Sturgis for its negligent treatment of Perez

× B To outline the alleged educational mistreatment Perez faced

× C To describe Perez's various educational needs

× D To advocate for qualified aides for deaf students

The following text comes from Marquis de Nasaillac's 1887 article "Megalithic Monuments in Spain and Portugal."

> Nothing in the ancient history of man is of more considerable interest than are those monuments, at once rudely grand and mysteriously simple, which have been designated megalithic. They may be simply raised stones, isolated menhirs, cromlechs arranged in a circle, or artificial caves formed by placing flat flags horizontally on standing supports. Dolmens or covered passages were usually buried under masses of earth or stones, so as to form veritable tumuli; but they always present the common character of being constructed in rough blocks, virgin of all human labor.

PREV. QUESTION NEXT QUESTION

7. Which choice best describes the overall structure of the text?

- ✖ A It describes the elaborate carvings on the megalithic blocks, then details their interior.
- ✖ B It explains the intrigue surrounding the ancient stones, then relays their symbolism.
- ✖ C It lists the diverse structures of the megaliths, then explains the commonality between them.
- ✖ D It speculates about the cultures that built the megaliths, then defines the stones' arrangements.

The following text is from the 1954 *Brown v. Board of Education* ruling, authored by chief justice Earl Warren.

> Compulsory school attendance laws and the great expenditures for education both demonstrate our recognition of the importance of education to our democratic society. It is required in the performance of our most basic public responsibilities, even service in the armed forces. It is the very foundation of good citizenship. Today it is a principal instrument in awakening the child to cultural values, in preparing him for later professional training, and in helping him to adjust normally to his environment. In these days, it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education. Such an opportunity, where the state has undertaken to provide it, is a right which must be made available to all on equal terms.

PREV. QUESTION NEXT QUESTION

8. Which choice best describes the function of the underlined sentence in the text as a whole?

✖ A It advocates for mandatory school attendance for children as discussed earlier in the text.

✖ B It argues that education should be equally available to all people as discussed earlier in the text.

✖ C It explains why children need education to become good citizens as discussed earlier in the text.

✖ D It elaborates on the vocational and social importance of education as discussed earlier in the text.

**Text 1**

Historians have long grappled with the question of how fundamental shifts occur within societies, encompassing changes in social structures, cultural norms, and political systems. According to Thomas Carlyle's "great man theory," these transformative processes are often attributed to the influence of charismatic leaders who inspire mass movements. This perspective suggests that influential individuals play a central role in shaping historical events, with their actions determining the course of societal changes.

**Text 2**

Researcher Dr. Hahrie Han of Johns Hopkins University has challenged the notion that charismatic leaders alone are responsible for driving societal transformations. Rather, there is a growing recognition of the importance of collective action and grassroots movements in instigating significant shifts across various aspects of society. True societal change encompasses the cumulative impact of numerous individuals and groups working together towards common goals, rather than being solely reliant on the actions of leaders.

PREV. QUESTION NEXT QUESTION

9. Based on the texts, how would Dr. Hahrie Han (Text 2) most likely respond to the "great man theory" discussed in Text 1?

× A It is an underestimation given that the great man theory does not address the ripple effect leaders can have on the rest of society.

× B It is an oversimplification given that the great man theory focuses on the impact of key people in history rather than the efforts of grassroots movements.

× C It is an oversight given that the actions of many individuals are far more significant than the impact of one powerful leader.

× D It is an exaggeration given that the great man theory fails to acknowledge that the power of leaders is contingent upon the consent of the people they lead.

During its peak from the 1950s to the 1970s, Brutalist architecture embraced an aesthetic that prioritized the utilization of industrial materials, particularly concrete, to fashion minimalist and bold geometric structures. A student writing a paper on the history of architecture claims that Brutalist architects devised buildings that were visually striking but ultimately inefficient in terms of daily practical use.

PREV. QUESTION NEXT QUESTION

10. Which quotation from an essay by an architecture historian would best illustrate the student's claim?

✖ A "Daring uses of sharp angles, as a feature of Brutalism, were not among its failings. Confusing walkways, dangerously low ceilings, and hopelessly inept floor plans were."

✖ B "In the work of some Brutalists, practical concerns outweighed expressive flourishes."

✖ C "With concrete, Brutalists transformed buildings into laboratories of shape and contrast. Libraries, for instance, became testing grounds for concrete curves, towers, spikes, and ramps."

✖ D "Generally, Brutalists resided in one of two camps: those who saw Brutalism as a departure from the past and those who prized continuity with earlier architecture."

*Northanger Abbey* is an 1803 novel by Jane Austen. In the book, the main character Catherine Morland expresses dissatisfaction with history because she struggles to relate to it: _____

PREV. QUESTION | NEXT QUESTION

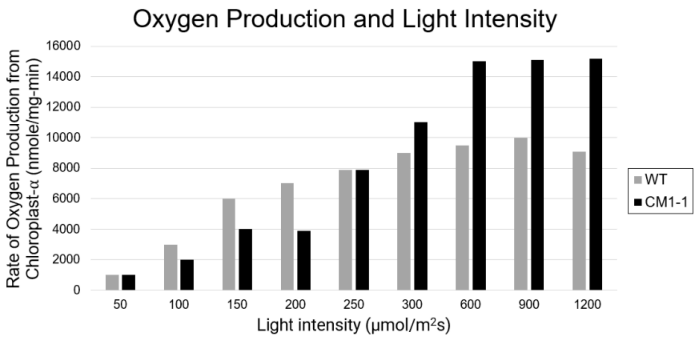

11. Which quotation from *Northanger Abbey* most effectively illustrates the claim?

A "That is, I can read poetry and plays, and things of that sort, and do not dislike travels. But history, real solemn history, I cannot be interested in."

B "I read it a little as a duty, but it tells me nothing that does not either vex or weary me: the quarrels of popes and kings, with wars or pestilences, in every page."

C "You are fond of history! And so are Mr. Allen and my father, and I have two brothers who do not dislike it. So many instances within my small circle of friends—remarkable!

D "To be at so much trouble in filling great volumes, which, as I used to think, nobody would willingly ever look into, always struck me as a hard fate."

Huesemann and colleagues studied the impact of limiting pigments in algae photosynthesis in 2008. They hypothesized that with fewer pigments, the algae would more efficiently utilize light. After initial testing against the wild-type (WT) control strain of *Cyclotella* during exponential growth, two genetically modified pigment-reduced strains, CM1 and CM1-1, were studied. The rate of photosynthesis "saturates" at the level of light intensity in which increasing the intensity no longer yields large increases in oxygen production. In lab experiments, the researchers discovered that CM1-1 saturates _____.

PREV. QUESTION NEXT QUESTION

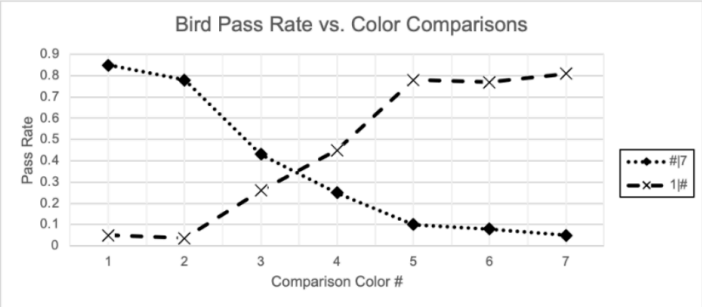

12. Which choice most effectively uses data from the graph to complete the statement?

× A approximately when it reaches an oxygen rate of 15,000 nmol/mg-min, compared to the wild type, which saturates at an oxygen rate of 9,000 nmol/mg-min.

× B approximately when it is treated with 300 $\mu$mol/m$^2$s of light, compared to the wild type, which saturates at an oxygen rate of 9,000 nmol/mg-min.

× C approximately when it reaches an oxygen rate of 15,000 nmol/mg-min, compared to the wild type, which saturates at 900 $\mu$mol/m$^2$s of light.

× D approximately when the algae is treated with 600 $\mu$mol/m$^2$s of light, compared to the wild type, which saturates at around 300 $\mu$mol/m$^2$s of light.

Studying the relationship between bird mating preferences and feather color, Matthew Zipple and colleagues examined the way birds perceive color. They presented songbirds with a grid of wells, four of which were covered by solid discs and two by multicolored discs. The birds "passed" a trial by flipping over the two multicolored discs in two minutes or less to earn a food reward. The degree to which the colors on a disc differed from one another was measured on a scale of 1 to 7. For example, 1|7 had a wide color difference, while 1|1 was a solid disc. Given the results of the study, Zipple concluded that birds sort colors into categories rather than perceiving color as shades on a continuous spectrum.

PREV. QUESTION NEXT QUESTION

13. Which choice most effectively uses data from the graph to support the researchers' conclusion?

✖ A When color 1 was compared to colors 1 and 2, birds had a low pass rate, but the pass rate steadily increased as the comparison color became more different from color 1.

✖ B The birds had a high pass rate when the comparison color was low compared to color 7, and the pass rate became steadily worse as the color became closer to 7.

✖ C There was a drop in the birds' pass rate going from color comparison values 2–5 and 5–2 for comparison categories #|7 and 1|#, respectively.

✖ D The pass rates of the trials of the two different types of discs intersected between color comparison values of 3–4.

William Shakespeare was considered a genius of his time, authoring thirty-seven plays and 154 sonnets. Because his works exhibit erudite references to classical literature, foreign languages, and courtly life, some skeptics challenge the notion that an actor from modest beginnings could possess such sophistication. As such, these doubters suggest that "Shakespeare" is a pseudonym concealing a more privileged author. Scholar Jonathan Bate refutes this theory, citing Shakespeare's acting troupe involvement and court performances as sources for his knowledge of courtesan life. Hence, Bate contends that skeptics question Shakespeare's identity as a man from a small English town because _____

PREV. QUESTION NEXT QUESTION

14. Which choice most logically completes the text?

× A that part of England was not exposed to the sonnet form prevalent in other parts of England.

× B they would rather assume that all individuals from modest backgrounds are completely illiterate.

× C they have a misconception that only the wealthy elite could craft such sophisticated prose and verse.

× D they believe that acting troupes lacked access to classical literature and sources regarding courtly life.

In his first essay arguing for the ratification of the new constitution, Alexander Hamilton discusses the motives of both supporters and opponents of the document. Hamilton argues that many individuals oppose the new constitution because they benefit from the status quo. However, he concedes that this is a minority; most of the opposition is sincere and seeks to better the country. Hamilton also admits that some of the constitution's supporters are motivated by greed and selfishness. As a result, _____.

PREV. QUESTION NEXT QUESTION

15. Which choice most logically completes the text?

× A he avoids the issue of personal integrity altogether in his discussion of the new constitution.

× B he argues these selfish individuals discredit the constitution they supposedly support.

× C he points out that neither side has compelling arguments about the document.

× D he recognizes the motives of both supporters and opponents are diverse and multifaceted.

A 2023 study by Nadine Dijkstra and Stephen Fleming examined people's ability to differentiate between reality and imagination. Volunteers were asked to imagine diagonal lines on an initially blank screen and then rank the vividness of the lines they imagined. Unbeknownst to volunteers, the researchers would periodically project real lines onto the screen while at other times, they left the screen blank. Dijkstra and Fleming found that the more vivid a subject perceived a line, the higher the chances they would assume the line was real, whether or not it truly was. Thus, researchers concluded that _____.

PREV. QUESTION NEXT QUESTION

16. Which choice most logically completes the text?

× A people with highly vivid mental imagery would struggle to distinguish between reality and imagination.

× B people fail at surprisingly high rates to differentiate between what is real and what is imaginary.

× C most people would find it difficult to tell reality apart from imagination when looking at a digital screen.

× D people with more screen time in their lives have more difficulty telling what is real apart from what is imaginary.

Deep beneath the Church of San Pablo, California, a team of archaeologists discovered a web of underground passageways believed to have been built by the Zapotecs around the sixth century BCE. However, when Spanish missionaries built the Church of San Pablo in the fifteenth century, they decided to close off all entry points, though their reasoning _____ unclear.

× A remain

× B remains

× C have remained

× D were to remain

Inspired to design a prosthetic arm that was both affordable and functional, Benjamin Choi used a 3D printer, fishing wire, and other common household materials _____ a prosthetic attachment that would cost around $300 to produce—a fraction of the amount of most synthetic limbs. Perhaps even more impressive is the fact that Choi was only a tenth grader when he conceived of the prototype.

× A Marshall's research persevered, eventually leading to

× B Marshall's perseverance with the research eventually led to

× C Marshall persevered with his research, eventually leading to

× D the perseverance of Marshall's research eventually led to

23

Which choice completes the text with the most logical transition?

The landlocked country of Bhutan operates as a constitutional theocracy with Buddhism as its official religion, which means the country requires its citizens to uphold Buddhist values. _____ the Bhutanese people sometimes resort to workarounds when these values conflict with their interests. The slaughtering of animals, for example, is strictly prohibited, yet some Bhutanese circumvent this by transporting cattle across the border to India for processing.

- A Subsequently,
- B Nevertheless,
- C Ultimately,
- D Similarly,

University of Leeds glaciologist Anna Hogg states that Antarctica has lost an enormous percentage of its ice—equivalent to 836,330 square miles, the size of Greenland. This ice loss will have significant implications for the Earth's temperature, as the ice helps cool the Earth by reflecting the sun's rays. _____ with less ice, less sunlight will get reflected into the atmosphere, warming the Earth's climate.

24. Which choice completes the text with the most logical transition?

- A Granted,
- B For example,
- C That said,
- D Thus,

While researching a topic, a student has taken the following notes:

- The Fluxus art movement was founded by George Maciunas in the early 1960s and originally focused on experimental music rather than visual art.
- Derived from the Latin word for "flowing," the term "Fluxus" represents the artistic philosophy of the movement, characterized by the absence of rigid definitions regarding the nature of art.
- It challenged the notion that museums were the sole authority in determining the value of art, while also questioning the idea that only the educated could appreciate art.
- The Fluxus movement focused on experimental works that emphasized audience participation as active observers in the artistic experience.
- Conceptual art prioritizes ideas over aesthetics, challenging the boundaries of art and encouraging critical engagement with artistic intention and intellectual exploration.
- It can use any kind of material and be expressed through any type of medium, whether through performance or sculpture.

PREV. QUESTION NEXT QUESTION

25. The student wants to highlight the similarities between the Fluxus movement and the conceptual art movement. Which choice most effectively uses relevant information from the notes to accomplish this goal?

× A The conceptual art movement, similar to the Fluxus movement in its early stages, initially focused on music rather than visual expression.

× B Similar to the conceptual art movement, the Fluxus movement prioritized ideas over the execution of the art itself.

× C Like the Fluxus movement, the conceptual art movement challenged the idea that only museums could decide the true value of art.

× D The Fluxus movement and conceptual art movement both challenged traditional definitions of art, encouraging audience engagement in the artistic process.

While researching a topic, a student has taken the following notes:

- Cognitive Load Theory (CLT) is an idea popularized by psychologist John Sweller.
- This theory posits that the mind depends on “working memory” to learn new tasks.
- Working memory involves the effort or attention needed to absorb and store a new body of information.
- According to psychologist Christian Jarrett, working memory is different from “long-term memory.”
- Long-term memory involves the use of facts that can be recalled almost effortlessly in order to complete tasks.

PREV. QUESTION NEXT QUESTION

26. The student wants to compare how two forms of memory function. Which choice most effectively uses relevant information from the notes to accomplish this goal?

✖ A Cognitive Load Theory, as explained by John Sweller, deals largely with the operations of “working memory,” which is involved with assimilating new facts or ideas.

✖ B According to psychologist Christian Jarrett, humans rely on various forms of memory, such as working memory.

✖ C While long-term memory operates with little apparent effort, working memory requires conscious effort in order to process new information.

✖ D While John Sweller has provided insights into the functions of "working memory," psychologist Christian Jarrett has focused on the mechanisms of long-term memory.

While researching a topic, a student has taken the following notes:

- Heat domes are large areas of high atmospheric pressure that trap hot air and can lead to heat waves.
- Heat waves, which are extended periods of high temperatures and humidity, can stem from factors beyond heat domes, including traveling hot air masses from other regions by wind.
- A 2023 study led by Xing Zhang analyzed how heat domes can affect the frequency and intensity of heat waves by investigating the heat event of summer 2021 in the Northwest.
- The team found that the Northwest heat dome accounted for more than half of the temperature anomalies observed in the region that summer.
- The team projected that the general population will experience more exposure to heat waves due to increased frequency of heat domes.

PREV. QUESTION NEXT QUESTION

27. The student wants to describe the study and its findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

× A A study led by Xing Zhang in 2023 explored the difference between heat domes and heat waves, concluding that both are related to trapped hot air masses in the atmosphere.

× B In 2023, Xing Zhang's team conducted a study to analyze the correlation between heat domes and heat waves, revealing that the heat dome in the Northwest in summer of 2021 caused over half of the temperature anomalies in the region.

× C The focus of the 2023 study led by Xing Zhang was to explore the differences between heat domes and heat waves, while also predicting that the general population will encounter more heat waves in the future.

× D In 2023, Xing Zhang's team investigated the contributing factors leading to the heat wave in the Northwest in the summer of 2021, aiming to determine if heat domes were the leading cause of more heat waves.
